

# LEGACY® PLATINUM Battery

The Legacy® Platinum Battery by Douglas™ Battery offers the ultimate in maintenance-free power. This Valve Regulated Lead Acid (VRLA) battery system is designed and manufactured to provide long life and superior performance, while reducing maintenance costs and operating hazards. The Legacy® Platinum valve regulated battery construction and gas-recombinant technology eliminate the watering, corrosion cleanup and leakage associated with traditional flooded batteries. All of these combine to make Legacy® Platinum batteries the perfect match of superb power and hassle-free operation.

## Powerful Design

Valve regulated cell construction eliminates the need for watering and prevents spillage and corrosion. A sleeved positive plate separator with a unique back-rib design eliminates shorts and potential misalignments common with leaf separators. The unique back-rib design increases electrolyte flow and maximizes contact with the negative plate. A positive plate with thicker grid design increases contact with the active material for more power and extended battery life. A negative plate designed with a staggered grid pattern provides the greatest amount of active material.

## A Complete System

It doesn't get any easier than this. The Legacy® Platinum Battery and Charger Walkie Combo, an innovative concept in pallet jack batteries, combines one of the industry's sturdiest maintenance-free batteries with a perfectly matched charger for the most efficient technology in a single compact unit. You get better efficiency day-to-day with the Legacy Platinum Walkie Combo. It's an easy, safe and convenient package that's ideal for light to medium material handling applications.

## Premium Douglas™ Tray Coating

- Electrostatic, baked-on epoxy on tray withstands corrosion and the roughest working conditions
- Reduces voltage tracking and shorts
- Saves maintenance on lift truck roller compartments
